

HYBRID NETWORK VIDEO RECORDER (ANALOGUE / IP CAMERAS)

exacqVision® Pro

PREPARE TO BE 'BLOWN AWAY!'

Brilliant Reproduction

- Configure any combination of Analogue/IP/IP Megapixel Cameras
- Support for industry leading brands of IP Cameras, Access Control systems and Retail Analytics
- Advanced Searching & Zoom Functions in both Live View and Playback

Support for leading IP camera brands such as:

Support for leading Access Control brands such as

ADVANCED HYBRID VIDEO SURVEILLANCE SOLUTIONS

How does a CCTV system which can provide images TWICE the quality of Blu-ray video sound? How about an infinitely scalable system with the highest level of integrated support for IP Cameras, Access Control and Retail Analytics from industry leading brands?

The Securview Exacqvision range of NVRs represent the leading edge of Analogue, Hybrid, IP and Megapixel IP video surveillance solutions. Exacqvision has been designed in the USA as a complete multi-platform security solution capable of recording all formats on one dedicated server platform. The system can seamlessly integrate analogue, IP and Megapixel IP cameras without the need for converters or external software. The software supports individual configuration of the cameras, allowing each camera to record at it's own resolution using the specified compression format! (MPEG4, MJPEG, H.264) Each Securview Exacqvision NVR can support from 4-32 Analogue cameras like any normal DVR and can be expanded to a total of 64 IP cameras per server.

The Securview Exacqvision Server can be supplied in 2 formats - Windows or Linux. The client software is pre-installed on the server, and can be installed and utilised on as many client related PCs as required. For greater accessibility, the client software is available in 3 formats; Windows, Linux or Mac.

Why choose Securview Exacqvision?

The Securview Exacqvision range of NVRs have been recognised as one of the number 1 client server platforms. The system provides full compatibility and support with a wide range of industry leading IP camera manufacturers such as Arecont Vision, Stardot, Axis, Sony, Panasonic, ACTi, IOIMAGE and many more. The support for such a wide range of cameras means that you aren't tied into buying 1 brand of camera - you have freedom of choice to get the best value solution for your client's needs.

If its wide range of IP Camera support wasn't enough, the Securview Exacqvision is also fully compatible with a number of leading edge Access Control companies such as Lenel, Cardax, DSX, ICT and PCSC, as well as fully supporting a number of Retail Analytic companies like MicrosRetail and Sensormatic. These companys' software integrates with the Securview Exacqvision software on all levels of security.

True Hybrid NVR

Seamlessly mix any combination of Analogue & IP cameras to create a truly Hybrid, scalable enterprise video surveillance system

Intuitive User Interface

- Contemporary, Intuitive User Interface requires minimal training to operate
- Common client softwares allows for connection of multiple servers to create scalable networks
- Powerful video and audio export features
- Powerful E-Map function

Extensive IP Camera Support

- Standard, PTZ and Megapixel cameras of any resolution
- Supports cameras from industry leading manufacturers, including Acti, Arecont Vision, Axis, Sony, and IQinvision
- Each server is expandable to up to 64 IP cameras

Powerful System Integration

- Support for a wide range of IP cameras, as well as integration with leading access control systems, retail analytics, iSCSI storage and much more

Fully Functional Multi-Platform System

Securview Exacqvision software is available for Windows, Linux and Mac

Secure and Stable Client Server Architecture

- Unlimited clients can connect to each server
- Server software runs of standard Windows and Linux platforms
- Browser client for viewing and playback in any web browser
- Mobile Support: View, search & playback on javascript-enabled mobile browsers such as Blackberry, Windows Mobile and iPhone

Advanced E-Map Functions

Maps can be imported from any image source. Cameras can be placed on maps. Seamlessly drag and drop maps and cameras in a view. Alarm events on maps create animated icons that can be selected for immediate assessment

Entry Level to Enterprise Solutions Available

As it is an infinitely scalable surveillance solution, the Securview Exacqvision can be customised to suit any number of applications, from an entry level 4 camera system to a multiple-server enterprise setup.

Intuitive GUI:

Intuitive Inbuilt Client Software

Each server has inbuilt client software which allows you to configure, view, record and playback footage.

Camera 'Drag and Drop' Setup

Customise the GUI to suit your needs. A simple tree structure displays all the cameras connected to the server. To view the cameras, simply drag the camera into the display window, as many times as needed (useful for Live Zooming function, see below).

Multi-Platform Use

The Securview Exacqvision client is compatible with Windows, Linux and Mac Operating Systems. In addition to this, the Exacqvision Web View supports all major internet browsers (Internet Explorer, Firefox, Opera, Safari, Chrome) and the Mobile Client is compatible with Blackberry, Windows Mobile and i-Phone devices.

Live View Display

Advanced Zoom Functions:

Live View Zooming

Playback Zooming

Live View Advanced Zoom Functions

One of the features which sets the Securview Exacqvision system apart from its competitors is the integrated Live Zoom feature. This allows you to not only display the same camera multiple times in the same window, but by simply clicking and dragging a window around an object of interest, you can zoom in to focus upon a specified area. These zoom settings can be saved for easy retrieval and use when reviewing playback.

Imagine being able to monitor multiple points of interest from the one camera in real time!

Advanced Zoom Playback Functions

The Securview Exacqvision Playback function provides the same level of advanced zooming as the live view. Click and drag on areas of interest in the display windows, and playback the footage. The system also allows you to apply any saved view settings when reviewing and playing back footage, instantly restoring your defined zoom settings.

Easily Configure the Live View and Playback Setup

The Securview Exacqvision software allows you to playback and review footage from multiple cameras at the same time. Simply drag and drop the required cameras into the display windows and apply any required zoom settings. The footage can be sorted by time and date recorded, by event trigger or by camera, making selecting the necessary footage easy.

Powerful Searching

Search for and view video from multiple cameras across multiple Securview Exacqvision servers simultaneously. Navigate quickly and easily through the footage to find necessary events. Footage can be exported in multiple formats. It can be exported as a standard video file (.avi) for reviewing in media playing software without advanced zoom functions; or the system can export the footage as a self-executable file which will open on any PC. The benefit of this method is that the executable file includes the viewing software allowing you to access the advanced functions such as selective zooming.
