INTRODUCTION

*Thank you for purchasing our unique **Mobile DVR** system. To ensure that you optimize the full capabilities of this product, please read this user's manual before proceeding. Be sure to keep this manual for future reference in case any problems or questions should arise. We hope you enjoy your new **Mobile DVR** system.*

IMPORTANT SAFETY INFORMATION

*When using your **Mobile DVR** equipment, basic safety precautions should always be followed to reduce the risk of fire, electric shock and personal injury. Please read the followings before using your equipment:*

1. Read and follow all instructions carefully.
2. Follow all warnings and instructions on the product.
3. Unplug the product from the power outlet before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.
4. Do not use this product near water.
5. Do not place this product on an unstable cart, stand or table.
6. Do not allow anything to rest on the power cords. Do not place this product in a location where the cords can be stepped on or where someone can trip over them.
7. Do not use this product near an area where there is a potential of gas leaks or near any explosive fumes.
8. Do not place this product near or over a radiator or any other heat source.
9. Use **ONLY** the power cord supplied with the system.
10. Do not overload the wall outlet or power cord where the power cord is installed. This can result in fire or electric shock.
11. This equipment is to be opened by **ONLY** a qualified serviceperson. There are no user serviceable parts inside. Opening this equipment may expose you to dangerous voltage and other risks. Incorrect re-assembly of this equipment may result in electric shock.
12. Avoid spilling liquid on this equipment and do not insert any objects through the ventilation slots.

UNPACKING YOUR SYSTEM

Your DVR system will include the followings:

1 x Mobile DVR	
4 x Screws for fixing DVR	
1 x A/V Input connector	
2 x Fuse (for DVR power cord & key on cord)	
1 x Tool for removing HDD tray and front cover	
1 x DC power cord and Key on cord	
1 x RCA A/V connector	
1 x RCA A/V connector	
1 x USB cable for data download(mobile rack)	
1 x IR remote control	

1 x User's Manual	
-------------------	---

Optional Accessories

◆ External GPS unit (GPS-E1)	
◆ Sensor signal box (Driver action detecting box)	
◆ Alarm I/O box with 1M cable	
◆ Panic button with 3M cable	
◆ G sensor box

21. Fast rewind button
22. Rewind button
23. Play button
24. Fast forward button

INSTALLATION

DVR Installation

1. Insert the attached key to open the front lock panel.

2. Hard Disk installation

Please carefully follow the steps as below to install Hard Disk Drive.

- a). Fix the rubbers to 2.5" HDD two sides as the picture showed below:
(The rubber can protect the HDD.)

b). Take out the mobile rack.

Step 1, 2). Take off the top cover.

Step 3). Connect the cable to 2.5" hard disk. (Make sure the HDD pin is correctly connected)

Step 4). Put the HDD into the DVR HDD slot.

Step 5, 6). Close the top cover and insert the mobile rack to DVR.

Please refer to the installation process as the following drawing:

3. System camera installation

Connect one end of camera cable to Camera and the other end to Video Input terminal at the back of DVR. Please number the camera by yourself for convenient operation.

4. Audio and Video output connection

The A/V output terminal is in front of the DVR panel. Connect the A/V output connector to this terminal and connect A/V output cord to the monitor.

5. Driver Action Detecting Wire Connection

Connect Driver action box sensor input socket and follow the drawing showed below to connect the other end with the car signal wire.

6. Mile/KM select switch

Please select the record speed by Mile or KM to meet your requirement.

7. Power connection

7-1. Plug the red power cord to Battery positive (+) position (e.g. car battery +).

7-2. Plug the black power cord to Battery negative (-) position (e.g. car battery -).

When the power is connected, the DVR is ready to be used.

7-3. Plug the wire for key [On] and key [Start] wire connection

Connect the key on connecting wire (yellow) to car key "ON" position.

Connect the key start wire (white) to car key "Start" position.

The built-in power supply with delay circuit board designed for DVR to delay switch-on time for 10 seconds. With the delay, it can avoid DVR working on unstable voltage.

8. Delay time select switch

The delay switch-off time from 5 minutes to 60 minutes selected by switch depending on the user requirement.

Delay time setting switch:

Switch No.	1 On	2 On	3 On	4 On	5 On	6 On	All Off
Delay time	Car key short	5 minutes	10 minutes	20 minutes	30 minutes	60 minutes	5 seconds

Remarks:

* The Switch 1 is used to replace car key while using the DVR outside the car.

* The factory will preset delay time to "0" (= no delay time function). The user has to switch the required delay time so that it can function and will go standby mode without using any current while DVR is switch off.

Note:

The DVR switch-off delay function can work normally only when key on/key start wire is correctly connecting.

9. Panic button connection (optional)

The panic button can be connected to show DVR working condition when the DVR is hidden in trunk or somewhere cannot be seen. The box design has the following functions:

a) Power indicator LED. b) Record indicator LED. c) GPS signal indicator LED. d) Alarm buzzer. e) Panic button for emergency.

10. Notification Device installation (optional)

Connect Notification device to this socket to extend the DVR function.

11. Function Expansion I/O socket connection (optional)

This socket can connect LAN box or sensor recorder for future requirement.

12. GPS Device installation (optional)

Connect GPS device to the GPS socket and fix it on top of dashboard or car roof in order to directly receive satellite signal and prevent the antenna being covered by any metal part.

13. Alarm I/O box connection (optional)

Connect the alarm I/O box to this socket. Then, you can connect the sensor, alarm or PTZ camera. The signal I/O box is showed as below:

14. G Sensor box connection (optional)

Connect the G Sensor box to G Sensor box socket.

15. DC 12V output plug

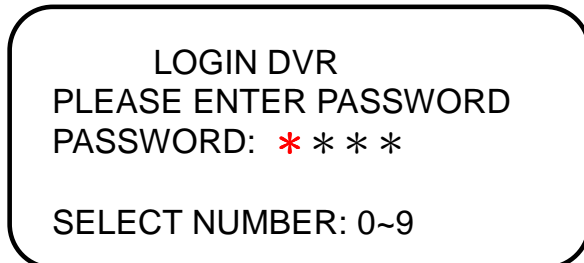

This plug can supply 12V DC power.

BEFORE OPERATION

- (1) The system will auto detect the hardware and enter **Recording** mode while hardware is in normal condition.
- (2) The system default AUTO FORMAT setting is "ON". If the HDD is new or unrecognized, the DVR will auto format the HDD.
- (3) If [NO HDD] signal is shown on screen, please check the mobile rack is installed or not. If it is not this problem, please turn off the power and check the HDD connecting wire and check the HDD master/slave selecting jumper which has to be set to "Master". You can then turn the power back on.
- (4) If [NO VIDEO] is showed on screen, please check whether video input connector is connected with camera correctly or not.
- (5) It is suggested to turn on the camera power before turning on the system power.

OPERATION

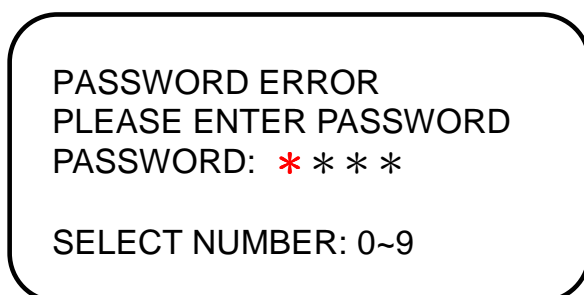

The system is preset to OFF for [KEY LOCK] mode. If the system is set to ON for [KEY LOCK] mode, the screen will show the following message. Please key in security code by remote control number buttons to enter the OSD menu for setting.

Then, press  [Enter] button. If the screen shows below, it means the password is correct.

If the screen shows below, it means the password is incorrect. Then, please enter correct password in order to enter Main Menu or playback.

OSD (On Screen Display) Menu Setting Operation Process

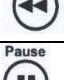

1. Press  Menu button to enter menu selection mode.
2. Press  Up button/  Down button /  Left button /  Right button to select the item for setting.
3. Press  Enter button to enter Sub menu to select item for setting.
4. Press  (value up) button or  (value down) button to change the value for your setting.
5. Press  key to exist for other setting.

Key and Function for Operation

[ALM]: Alarm record

OSD Setting Operation

1. Camera Setup Operation

1.1 Title Setup

- A. Press MENU button  to enter menu selection mode.

- B. Use  /  /  /  button to select [CAMERA SETUP] setting section.

- C. Press  button to enter Camera Setup screen:

- D. Press  button to enter camera title setup

- E. Use  /  /  /  button to select channel and set title.

- F. Use  /  button to change the camera number.

G. Press MENU button  to exist for other setting

1.2 Color Setup

A. Press MENU button  to enter menu selection mode.

B. Use  /  /  /  button to select [CAMERA SETUP] setting section

and press  button to enter channel select mode.

C. Use  /  /  /  button to select [COLOR SETUP] setting section

and press  button to enter.

- a. Brightness: Brightness is adjustable from 00~63. "00" = the darkest, "63" = the lightest.
- b. Contrast: Contrast is adjustable from "00" ~"63".
- c. Saturation: Saturation is adjustable from "00"~"63".
- d. Hue: Hue is adjustable from "00" ~"63".

D. Use  /  button to select the camera. (CAM 01/02/03/04)

E. Use  /  /  /  button to select the item you want to change.

F. Use  /  button to change the value.

G. Press MENU button  to exist for other setting

1.3 Motion Detection

A. Press MENU button  to enter menu selection mode.

B. Use  /  /  /  button to select [CAMERA SETUP] setting section.

C. Use  /  /  /  button to select [MOTION DETECTION] setting section.

MOTION DETECTION

AREA SETTING	CH01
	RUN
SENSITIVITY	07
(1: MOST SENSITIVE)	
RELAY OUT	OFF
FULL SCREEN	OFF

----- 1 is the most sensitive value.
There are 16 levels to be selected.

D. Press [RUN] to enter area setting and the screen will show as below:
(There are 16 x 12 blocks)

E. Use  /  /  /  button to select the area.

F. Use  /  button to activate or close the detection of the area. Press  button to select all activate or close. (This function will activate when the record mode is selected "Motion Detection (M)".)

G. Press MENU button  to exist above screen.

H. Use  /  /  /  button to select the item you want to change.

I. Use  /  button to change the value.

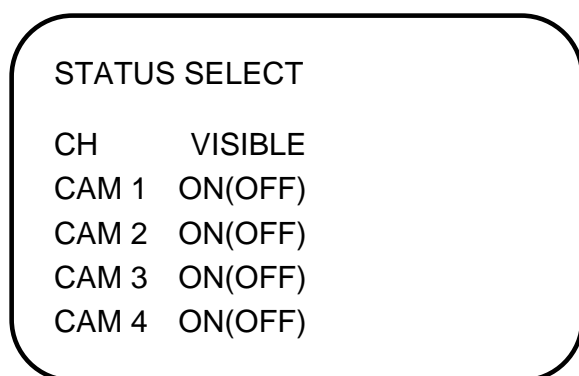

J. Press MENU button  to exist for other setting

1.4 Status Select

A. Press MENU button  to enter menu selection mode.

B. Use  /  /  /  button to select [CAMERA SETUP] setting section.

C. Use  /  /  /  button to select [STATUS SELECT] setting section.

D. Use  /  /  /  button to select the camera you want to change.

E. Use  /  button to change the screen to be visible or not. (Visible OFF: The recording information will be stored in hard disk, but the live picture will not be showed on screen. Visible ON: The recording information is showed same as on screen.)

F. Press MENU button  to exist for other setting

2. Date / Time / Daylight Saving Time Setting

A. Press MENU button  to enter menu selection mode.

B. Use  /  /  /  button to select [DATE/TIME SETUP] setting section.

DATE/TIME SETUP

A: Alarm L: Video loss M: Motion

R: Record B: Boot P: Panic

- b. Use  /  buttons to select page.
- c. Use  /  buttons to select event which you want to play back.

- d 、 Press  Enter button to playback.
- e 、 During playback, press stop button to back to EVENT SEARCH.

Press  “Menu” button will exit.

- * Each page can display 10 events (maximum 1000 events can be recorded).
- * The event log will be cleared simultaneously when format HDD.
- * EVENT is recorded in the HDD. It can be searched for playback when the HDD is removed and installed into the other DVR in same type.

In the play mode you can use play bar to control play function. The play bar buttons introduction as below:

 **FAST FOR.:** Fast Forward.

Press the “FF” once the playback speed will change to x2 speed to play, press again it will change to x4 and press again it will change x8, if you want to return to the playback speed just press the “Play” button.

 **FAST REW.:** Fast Rewind

Press the “FB” once the backward speed will change to x2 speed to backward play, press again it will change to x4 and press again it will change x8, if you want to return to the playback speed just press the “Play” button.

 **Pause:** Pause the playback.

 **Stop:** Stop playback and go back to the view mode.

PTZ CAMERA SETTING AND CONTROL

1. Introduction:

Connect the Signal I/O box to the DVR. The signal I/O box has RS485 ports for PTZ camera control.

2. Installation:

2.1 Setting PTZ camera control protocol:

Follow PTZ camera user manual to choose and setting control protocol, all the camera need to choose same protocol type.

2.2 Setting PTZ camera ID:

Follow PTZ camera user manual to set PTZ ID, each camera has a unique ID it's own. We suggest stronger CH1 camera use the ID no: 1, CH2 camera use the ID no: 2 ..., that you will have more convenience to control your PTZ cameras.

Follow the figure to connect all of cameras RS485 TX together and RX together, then insert RS485 TX into the RS485 TX terminal and RX insert into the RS485 RX terminal and tight it.

The signal I/O box is as follows:

3. PTZ control setting:

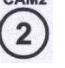

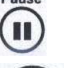

3.1 Go to DVR menu and select system, into system list and select subject of PTZ/Keyboard, then use left and right keys to select protocol to match your PTZ camera setting.

- 3.2 Use  /  /  /  buttons to select ID and use  /  button to change ID number.
- 3.3 Use  /  /  /  buttons to select PROTOCOL and use  /  button to select PELCO-P or PELCO-D.
- 3.3 Use  /  /  /  to select subject of BAUD RATE, then use  /  keys to select baud-rate to match your PTZ camera setting.
- 3.4 Use  /  /  /  to select SPEED, then use  /  keys to select speed to match your PTZ camera setting.

4. PTZ control:

How to move PTZ camera?

1. Select     channel which you want to control
2. Press  PTZ (pause) button into PTZ mode.
3. Press  Up key to move camera up.
4. Press  Down key to move camera down.
5. Press  Left key to move camera left.
6. Press  Right key to move camera right.
7. At any time press  Stop key to stop camera move.
8. Press  Auto (Enter) key to turn the auto pan on.
9. Press  PTZ key to quit PTZ control mode.

USB DOWNLOAD INSTRUCTION

1. USB SLAVE DOWNLOAD

USB Slave Download Process:

1.. Connect USB download cable one end to the DVR USB Slave download port and the other end to PC.

2.. Enter the [BACKUP SETUP] screen as below:

Press  MENU button to [MAIN MENU], then use  /  button to select [BACKUP SETUP], and then select [USB SLAVE]. The screen will show as below.

If the USB cable is not connected, the screen will show as below:

If the USB cable is connected, the screen will show as below:

3. Please copy the recording files to PC. (Please note that the PC should be Window 2000/XP version.)

USB slave working recorded data download speed

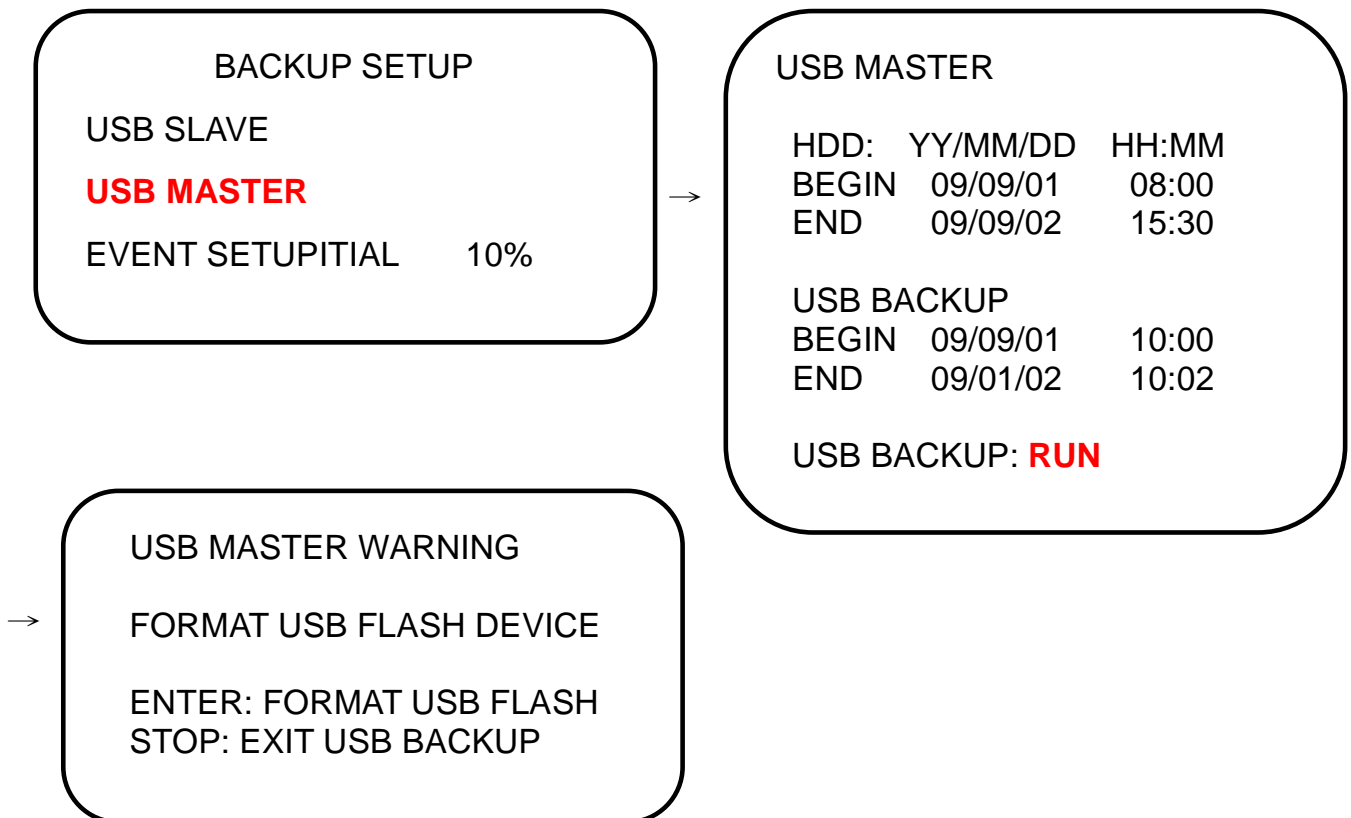

1. The system is designed with USB slave 2.0 high speed.
2. The download speed is 400M bit per second.
3. Will download 50M byte per second at idea condition. Need 20 seconds for download 1G byte data, if the actual efficiency is 50%, it will need 40 seconds to download 1G byte data.

2. USB HOST DOWNLOAD

a. Download by time

1. Connect the Flash device(Pen drive) to DVR Host download port.
2. Enter the [BACKUP SETUP] screen as below:

Press  MENU button to [MAIN MENU], then use  /  button to select [BACKUP SETUP], and then select [USB MASTER]. The screen will show as below.

Press [Enter] button to download, the DVR will start to format the Flash Memory (Pen Drive).

The screen will show:

When the format is finished, the “Bi” sound will appear, then it will continue to download and show the following on screen:

3. When the file is download completed, the DVR will appear continued “Bi” sound. Press Stop button and the warning voice will be stopped. Press MENU button to exit.

b. Download during playback:

1. Press “PAUSE” button and then press “COPY” button.
2. The system will download the recorded data one minute before and one minute after you press “PAUSE” button. For example, if you press “PAUSE” button at 2009/09/01 13:01:24, then the downloaded data will be three minutes from 2009/09/01 13:00:00 to 2009/09/01 13:03:00.

c. Quick download:

1. Plug memory stick into DVR USB Host port.
2. Press “COPY” button two times. Under such circumstances, the Record LED will stop flashing (in closed mode.)
3. The system will check whether there is any USB device connected.
4. If no, you will hear 5 short buzzing every 5 seconds. Press “STOP” button to exit. Then, go back to Step 1.
5. If yes, DVR will start download process. Under such circumstances, the Record LED will be in flashing mode.
6. When the download is completed, you will hear one long buzzing and the Record LED will stop flashing. Please press “STOP” button to exit. Then, the Record LED will re-start to flash that means go back to Record mode.
7. If the memory stick capacity is not enough, you will hear 3 short buzzing every 5 seconds. Under such circumstances, you can plug another memory stick and press “COPY” button one time to continue download process or press “STOP” button to exit.
8. If the memory stick is not well connected with DVR, you will hear 5 short buzzing every 5 seconds. Under such circumstances, please press “STOP” button to exit. Then, go back to Step 1.

SENSOR RECORDER FUNCTION OPERATION

(Optional for GDV-4860ML)

Signal Development Record Function

Total 8 kinds of signal development can be recorded in your mobile DVR as follows:

1. Right Turn, "RT" will be recorded and showed on screen.
2. Left Turn, "LT" will be recorded and showed on screen.
3. Stop Arm Extended, "SA" will be recorded and showed on screen.
4. Amber Lights On, "AL" will be recorded and showed on screen.
5. Brake On, "BR" will be recorded and showed on screen.
6. Backward, "BU" will be recorded and showed on screen.
7. Door 1, the video of door 1 camera will be showed on screen.
8. Door 2, the video of door 2 camera will be showed on screen.

The playback screen will show recorded signal development data location as below:

E120°50'43.24" N21°54'15.38"		ID2009	68% R
CAM1●		●CAM2	
CAM3●		●CAM4	
BR LT BU	09/01/09	08:56:50AM	REC CON
A1		BUS: 2009 H:W	30MPH

1. The location "LT" (Left Turn) will show "RT" when right turn signal lights up.
2. The location "BU" will be showed only when backward signal lights up.
3. The location "BR" will be showed only when Brake signal light is on.
4. The location "SA" will be showed only when Stop Arm Extended is on.
5. The location "AL" will be showed only when Amber Light is on.
6. The location "30MPH" (Speed) will show KMPH when your speed is selected to KMPH..
7. The location "H:W" is showed to indicate head direction (W=West, E=East, S=South, N=North).
8. The location "E120°50'43.24" is showed to indicate position longitude east of Greenwich (The location "E" while show "W" is meaning longitude west of Greenwich).
9. The location "N21°54'15.38" is showed to indicate position of northern latitude (The

location “N” while show “S” is meaning latitudes south of the Equator).

10. The location show “BUS:2009” is bus number key-in on DVR “OSD” menu under sub menu section.

11. The location “09/01/09 08:56:50 is showed as recorded time.

Video Signal Development Record Function

Five camera outputs can be connected to the box’s video input connector. The sensor recorder CPU will manage the signal to follow the car signal development and select one of the camera inputs for video output connector.

(Remark: The sensor recorder CPU will manage to output “Right turn view camera’s input” when right turn signal lights up, output “Left turn view camera’s input” when left turn signal lights up and output “Back view camera’s input” when backward signal light up. All other signal development will only output “Main direction view camera’s input”).

The sensor recorder with two video output connectors share same video output signal. One BNC female output for connect to one of the DVR input to record the video signal and the RCA socket is designed for connect to car monitor as assistance for driver.

Position, Speed & Head Direction Record in DVR Function

Car speed, position and head direction will be recorded in your mobile DVR. The speed can be recorded by KMPH or MPH (changed by ‘Select’ switch on front panel of the box); the recorded data will be showed on screen while playback.

GPS Location Record in Sensor Recorder Box Function

More than 7 days car location data will be recorded in the Sensor Recorder box. The location data recorded in Sensor Recorder box can be downloaded in computer as a GPS location data file to show road map when map software is transferred into.

Special Note:

The GPS can be positioned only when the antenna can directly receive at least 4 satellite signals. In other words, the GPS can be positioned only when there is no cover. So, if you are in garage or underground parking lot where can not receive satellite signal by GPS, when the car leaves this place, you have to check your DVR in the place where can receive and make sure you have got speed, direction and GPS data. This way, the recording can be done. Or, you have to stop the car for 1~3 minutes to let the GPS positioned for normal operation.

GPS Recorded Data Download Operation Process

1. Install USB driver software (attached in CD).
2. Install GPS download software (attached in CD).
3. Select GPS download software
 - a. Select COM port.
 - b. Select "Download" and key-in file name.
 - c. Press download button and keep for more than 2 seconds (can see the data loaded to the file, then can release) to download the GPS recorded data. The download LED will light up till download is completed.
 - d. Select "CLOSE" after download is completed (The download LED will be off after download is completed).
 - e. The download file will be saved under GPS download file; user can open the file to view.
 - f. The download file data is in standard GPRMC format.

Remarks:

1. When GPS display LED flashed, it means GPS does not succeed to get position data. When GPS display LED lights and keeps still, it means it gets position data.
2. Press and keep the download button, then turn on the power and then release the download button. This process will delete all recorded GPS data. The LED will flash after data is deleted.

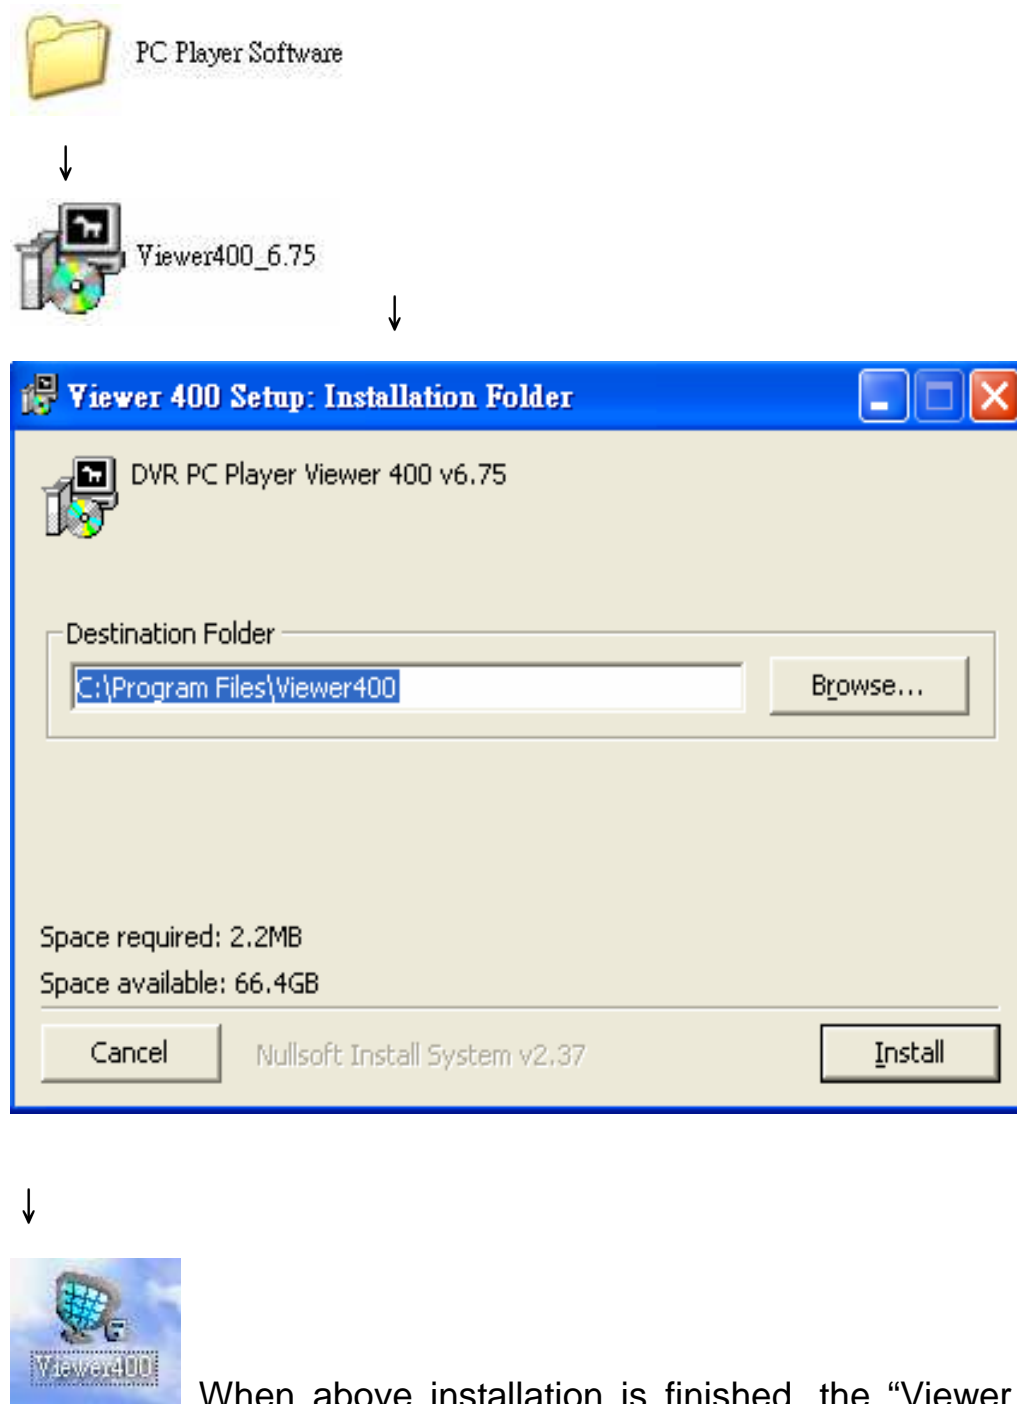

Show Road Map on Map Software

1. Transfer the GPS GPRMC file to match local map software.
2. Open local map software.
3. To transmit the recorded and transferred data to map software to show recorded road track on the map.

PC PLAYER SOFTWARE OPERATION

Install PC player software

Open the “PC Player Software” burnt on CD and install it on your PC.

When above installation is finished, the “Viewer 400” icon will be showed on desktop and ready to be used.

How to play the file

a. Connect DVR Slave port to PC

On DVR side: Press “**MENU**” button and enter “**USB SLAVE**” screen first.
MENU → BACKUP SETUP → USB SLAVE → RUN

Connect DVR Slave port to PC by USB cable and follow “Start playback” process to play the DVR files.

b. Connect hard drive (removable tray) by USB docking unit (dongle)

b-1. Remove hard drive from the DVR.

b-2. Connect playback dongle to hard drive (removable tray).

b-3. Connect USB cable to dongle, connect to USB port on your PC.

Start playback

1. Double-click on the Viewer400 icon on your desktop.

2. Enter **account: root** and **password: root**.

3. Click  button for the following screen:

Control panel function.

8. If the file does not meet your desired date/time, press

 to list all recorded image.

9. Select the desired file to play.

10. Press  button.

11. Click  to play video.

How to archive your event data

Once the file is opened (after follow Steps 1 ~ 10 of “Start playback” as mentioned above), please follow the steps below to archive your event data.

1. Select Play  or move the Time Line Scale to the start of the event. And, note the time on paper.

2. Continue to play the file until the event is over.

3. Click **Open New File** “Open New File”.

4. When the dialog box comes up, select “**Copy file to PC**”.

5. From the noted times, slide the time slider to the beginning time.

6. Now select “Set time” parallel to “Start Time”

7. Now move the time slider to the end of the event.

8. Now select “Set time” parallel to “End Time”.

9. Click “Browse” and select the “My Backup Video Files” folder you created earlier to save your file.

10. Click “Copy file to PC”.

11. When completed it will say “Finish”.

12. After finishing, close all dialog boxes.

Suggestion: You can then open the folder you created and rename the file. Make sure the file name ends with “.dvr”.

How to create an AVI file

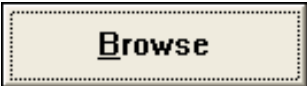

Once the file is opened (after follow Steps 1 ~ 10 of “Start playback” as mentioned above), please follow the steps below to create an AVI file.

1. Click  button to transfer the file to AVI format
2. Select camera channel. Then, move time slider to desired start time.

3. Click "Set Start".

4. Click "Set End".

5. Click  and choose the location you want to save.

6. Name your file.

7. Click . This may take several minutes depending on the file size to be created.

8. You will see the percent completed. When completed, click "OK".
