

PROFESSIONAL BACK TO BASE MONITORED SMOKE / FIRE DETECTION SYSTEM FOR HOMES

**EASY
TO
INSTALL**

24HR
Around The Clock Protection

The Watchguard™ Smoke is a true revolution in monitored fire detection systems. Utilising advanced wireless technology means installation is very simple, and the wireless design allows you to expand / relocate the system at anytime.

To install, simply connect the Communication Dialer plug-pack to a power-point, plug the phone lead into a phone socket, mount the wireless sensors, and then register with your Alarm Monitoring Centre.

When smoke is detected, the smoke alarms will sound and the Communication Dialer will transmit the detailed alarm activation data (Contact ID Format) via phone line to your monitoring centre for appropriate response action to be taken.

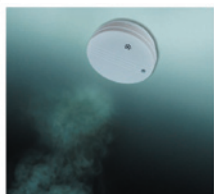

Package Includes:

- 1 x Communication Dialer Alarm
- 2 x Wireless Smoke Sensors
- 1 x 9V DC Power Supply for the Communication Dialer
- 1 x Phone Lead to connect the Dialer to your phone line

How The System Works:

WIRELESS SMOKE SENSORS Approved To AS 3786: 1993

1

These devices detect the presence of smoke in a room & automatically transmit a radio signal to the Communication Dialer. The sensors incorporate their own high frequency audible alarm and low battery warning.

COMMUNICATION DIALER ALARM

2

This is the "brain" of the system. When it receives an alarm code from the Wireless Smoke Sensor it automatically connects to your monitoring centre via your phone line. The in-built siren will also sound.

ALARM MONITORING CENTRE

3

You will then receive notification of the alarm event via phone. Next step is an example of a phone notification message. Please contact your preferred monitoring service provider to discuss their individual monitoring service plans, notification method and charges.

ALARM NOTIFICATION

4

"Hello John. This is Sally from the Monitoring Centre. Your smoke alarm system at 1 Smith Street Sydney has been activated at 11:14am by the smoke sensor in your master bedroom."
