

2.4GHz  
Wireless  
Transmission

- Ideal For:
- \* Airports
  - \* Campuses
  - \* Stadiums
  - \* Public Parks
  - \* Marinas
  - \* Beaches
  - \* Building to Building
  - \* Convention Centers
  - \* Security & Surveillance

## 2.4GHz IP67 Long Range Wireless Client Bridge

These Securview Wireless Client Bridge products are designed for outdoor long-range wireless communications based on the IEEE802.11 b/g standards, using 2.4GHz frequency. These cost-effective outdoor wireless products are ideal for building-to-building wireless communications. These client bridges are manufactured with an IP67-compliant weather-proof housing.

The WT2-CB12D has an internal 12dbi patch antenna which can transmit up to 12km, while the WT2-CBNFC is designed with an external female N type antenna connector for connecting with a specific antenna type which will determine the transmission distance.

They are designed for near Line-of-Sight (LoS) wireless applications. The radio performance of these wireless products is designed and optimized for long-range and high throughput wireless communications based on the IEEE 802.11 b/g standards.

They are designed with Power over Ethernet (PoE), which allows power and data transmitted over a single network cable. This capability provides for simple, convenient installation.
